

Modernize your IAM/IGA landscape

Advisory Services

As MIM will only be available in extended support until early 2029, companies that rely on it for identity and access management must **decide which system to replace it with.**

Depending on the organization's objectives and used MIM functionalities, they can:

- Replace it entirely with **Microsoft Cloud/Entra Family**,
- Combine Microsoft Cloud with a **Microsoft-friendly vendor** for additional functionalities,
- Migrate to **a new system.**

Picking the wrong vendor will have serious business consequences and this decision shouldn't be made lightly. The selected option needs to align with your objectives and enable a seamless, secure transition.

Why assess your MIM migration options with Qwey?

- ✓ **10+ years of experience** in IAM/IGA implementations, including integrating with niche products and building identity solutions from the ground up.
- ✓ **Several dozen of successfully delivered identity projects**, some of which had unique needs and required heavy customization.
- ✓ **Work across many industries**, including telecom, energy, ecommerce, healthcare, education and finance.
- ✓ **Experience with a variety of products**, including Microsoft, SoftwareIDM, Onedidentity, Omada, Savyint, Sailpoint, and Okta.
- ✓ **Detailed understanding of current solutions** thanks to established relationships with top identity vendors.

Our offering

We offer two types of MIM migration services. On top of running a comprehensive analysis and providing tailored recommendations, we can also handle the implementation of recommended solutions.

MIM migration advisory services

- ✓ **A comprehensive analysis** of your existing MIM environment.
- ✓ **Regular communication** with IT and business departments to understand all required functionalities and objectives for the go-to IAM/IGA product.
- ✓ **Development of** technical and non-technical **requirements** for the new IAM/IGA system.
- ✓ **Demo sessions** to review the short-listed solutions.
- ✓ **Help in the selection** of the right system.
- ✓ **Roadmap for replacing MIM** and implementing a new solution along with a development plan for the new system for the upcoming years.

MIM migration services

- ✓ **Solution design** – the first step after the MIM analysis, which helps envision a detailed implementation roadmap.
- ✓ **Implementation** – involves configuring the environment and processes in cooperation with the client. Adjustments are made continuously to ensure timely project completion.
- ✓ **User acceptance testing**, which helps verify whether the new system operates according to your organization's requirements. We ensure that the implemented solution offers 100%+ of capabilities and features of the MIM system.
- ✓ **Data migration** – either directly from MIM or other systems which will fuel the new solution with data. This step includes manual work, i.e., data preparation, migration to the new system, data and process verification and validation. This stage could reveal potential issues that weren't detected in user acceptance testing and require adjustments before launching the new system.
- ✓ **Go-live – switching to the new system** and pausing MIM to ensure all processes run smoothly. In case of any severe issues, we can return to MIM and make adjustments before fully transferring to the new solution.
- ✓ **Hypercare** – a standby mode which lasts between 2-4 weeks. Together with the client we monitor how the new solution runs, and if any problems occur, we make adjustments instantly.

We also offer **Managed Service** after the implementation project to support you after the launch of the new IAM/IGA system. By default, this plan requires a yearly commitment, but can be extended depending on your organization's needs.

Working with QWEY means:

Peace of mind

We will walk you through the entire process, supporting you throughout the implementation of the new system.

Security

Your organization does not have to worry that it will rely on an unsupported solution. Your infrastructure and systems will always be up and running and will be protected as you undergo the transition.

Confidence

The whole team who participate in the process are tech specialists with over 10 years of experience in the Identity space. Our cooperation will be based around your needs and processes to make sure that the proposed solution fully meets your expectations. Irrespective of **whether the implementation will be done by Qwey or a different vendor.**

What's next?

Get in touch to discuss your MIM migration options.

We offer a free hourly call to learn about your existing system and discuss how we could support your transition to a new IAM/IGA solution.
